

Eliminate your energy costs

Here at Penn Renewables we are always striving to bring our customers the most up-to-date technologies which reduce or even eliminate their energy operating costs. The products we offer are produced by some of the worlds most reputable companies. This ensures that systems will last long into the future and provide decades of risk-free, fixed power costs and a positive IRR for your firm's investment. With new Federal and some State incentives reducing your cost by 30-60%, RE systems have become an attractive investment that simultaneously create customer and community goodwill. With the uncertainty of the energy market, there has never been a better time to make RE an integrated part of your company's future.

The sun is setting on the days of steady flows of cheap fossil fuels.

**Invest in your Future—
Penn Renewables can show you how.**

R "A Full Service Renewable Energy Company"

- **Design and Install:**
 - ⇒ **Solar PV Power Plants**
 - ⇒ **Solar Hot-Water & Air**
 - ⇒ **Passive Solar Buildings**
 - ⇒ **Wind Turbine Farms**
 - ⇒ **Geo-Thermal**
 - ⇒ **Central UPS Systems**
- **Energy Audits**
- **Assist with Federal and State Rebates or Credits**
- **Guaranteed Installations**
- **Full Maintenance Programs**
- **In-house engineering (PE)**
- **Wind & Solar site surveys**
- **Carbon Footprint & Greenhouse Gas reduction plans**
- **Project payback projections**

PV (PhotoVoltaic) Solar Panels

PV panels make reliable electric power from the sun with 25+ year warranties. There are many different types of PV panels available on the market. Some are built for the lowest production cost while others are built to have the highest production density. Penn Renewables will specify the right panels for your needs.

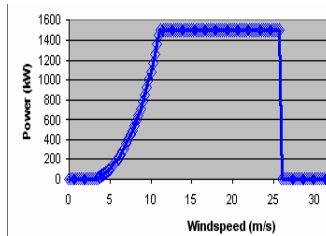

Solar PV panels provide decades of hassle-free power generation. Effectively purchasing 25-50 year's worth of reliable energy at today's prices.

Wind Turbines

Wind turbines are well known for producing reliable renewable energy. Turbines require special placement and permits. They cannot be installed everywhere. We can determine if your location is suitable.

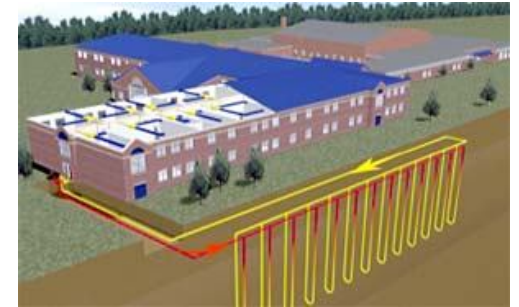

Solar Thermal Heating

The most efficient way of harnessing the sun is by direct heating of water or air. These systems are >90% efficient and provide your hot water or heat needs. Ask us how you can reduce your energy bills.

Geo-Thermal Systems

Geo-thermal is the most efficient way to heat and cool your buildings. These systems use the earth rather than air as the thermal source. This makes them twice as efficient as heat pumps with no noisy outdoor compressors. Payback periods can be less than six years.

Central UPS Systems

Never worry about power outages again. RE Systems can include cost effective, instant battery backup for your critical circuits, including; PBX Phone systems, servers, emergency lighting, computers, security systems, critical processes, etc.
